OVERVIEW

I am a researcher in computational color with extensive teaching experience in many aspects of mathematics and computer science. I have developed novel approaches to solve different problems ranging from color constancy to color stabilization, color characterization, color gamut mapping, high dynamic range imaging, image dehazing, and image denoising. I have published 33 articles in top-ranked journals (27 of them as either first or second author) and more than 40 international conferences. I have an European Patent granted -and a second application in process-, and research experience in cutting-edge research labs in Spain, UK, Canada, and Switzerland, working in high-profile research projects. I have extensive experience in teaching in both undergraduate and master courses in Spain and the UK, with more of 1100 hours of teaching already performed.
